

Mathematica Installation in USM

1. Go to <https://user.wolfram.com/portal/login.html>. Register a Mathematica account using your USM student email account.
2. Log into the Mathematica user portal to download a current or previous Mathematica installation source. Presumably you would like to download only the Windows unless you are using a Mac or Linux in your computer. Alternatively, you can also download a zipped version of the Mathematica installation code from <http://www2.fizik.usm.my/tlyoon/Downloads/> To this end, you will need to obtain the password to unzip the installation file, which can be found in <http://comsics.usm.my/tlyoon/info/password.txt>
3. Install the Mathematica code.
4. Obtain an activation key from the same Mathematica user portal you download the installation code. Use it to activate your Mathematica code.
5. Note that the installation file is huge, ~ 2.9 GB. So be patient when downloading it.
